PRODUCT RANGE

Ball Bearings

A ball bearing is a type of rolling-element bearing that uses balls to maintain the separation between the bearing races.

Spherical Roller Bearing

A spherical roller bearing is a rolling element bearing that permits rotation with low friction and permits angular misalignment.

Tapered Roller Bearing

Tapered roller bearings are rolling element bearings that can support axial forces as well as radial forces.

Cylindrical Roller Bearing

The cylindrical roller bearings have greater radial load capacity than ball bearings of same external dimensions and are particular suitable for arduous duties.

Bearing Units & Inserts

KYK Provides bearing units that are ready-to-mount, which are greased and sealed, and are able to compensate for misalignment of the shaft with respect of the housing.

Plummer Block

Plummer block is used to provide support for a rotating shaft with the help of compatible bearings & various accessories.

Stainless Steel Bearing

Stainless Steel bearings are applicable in corrosive environments such as water, acid, and reactive gas.

Needle Roller Bearing

A needle roller bearing is a special type of roller bearing which uses long, thin cylindrical rollers resembling needles.

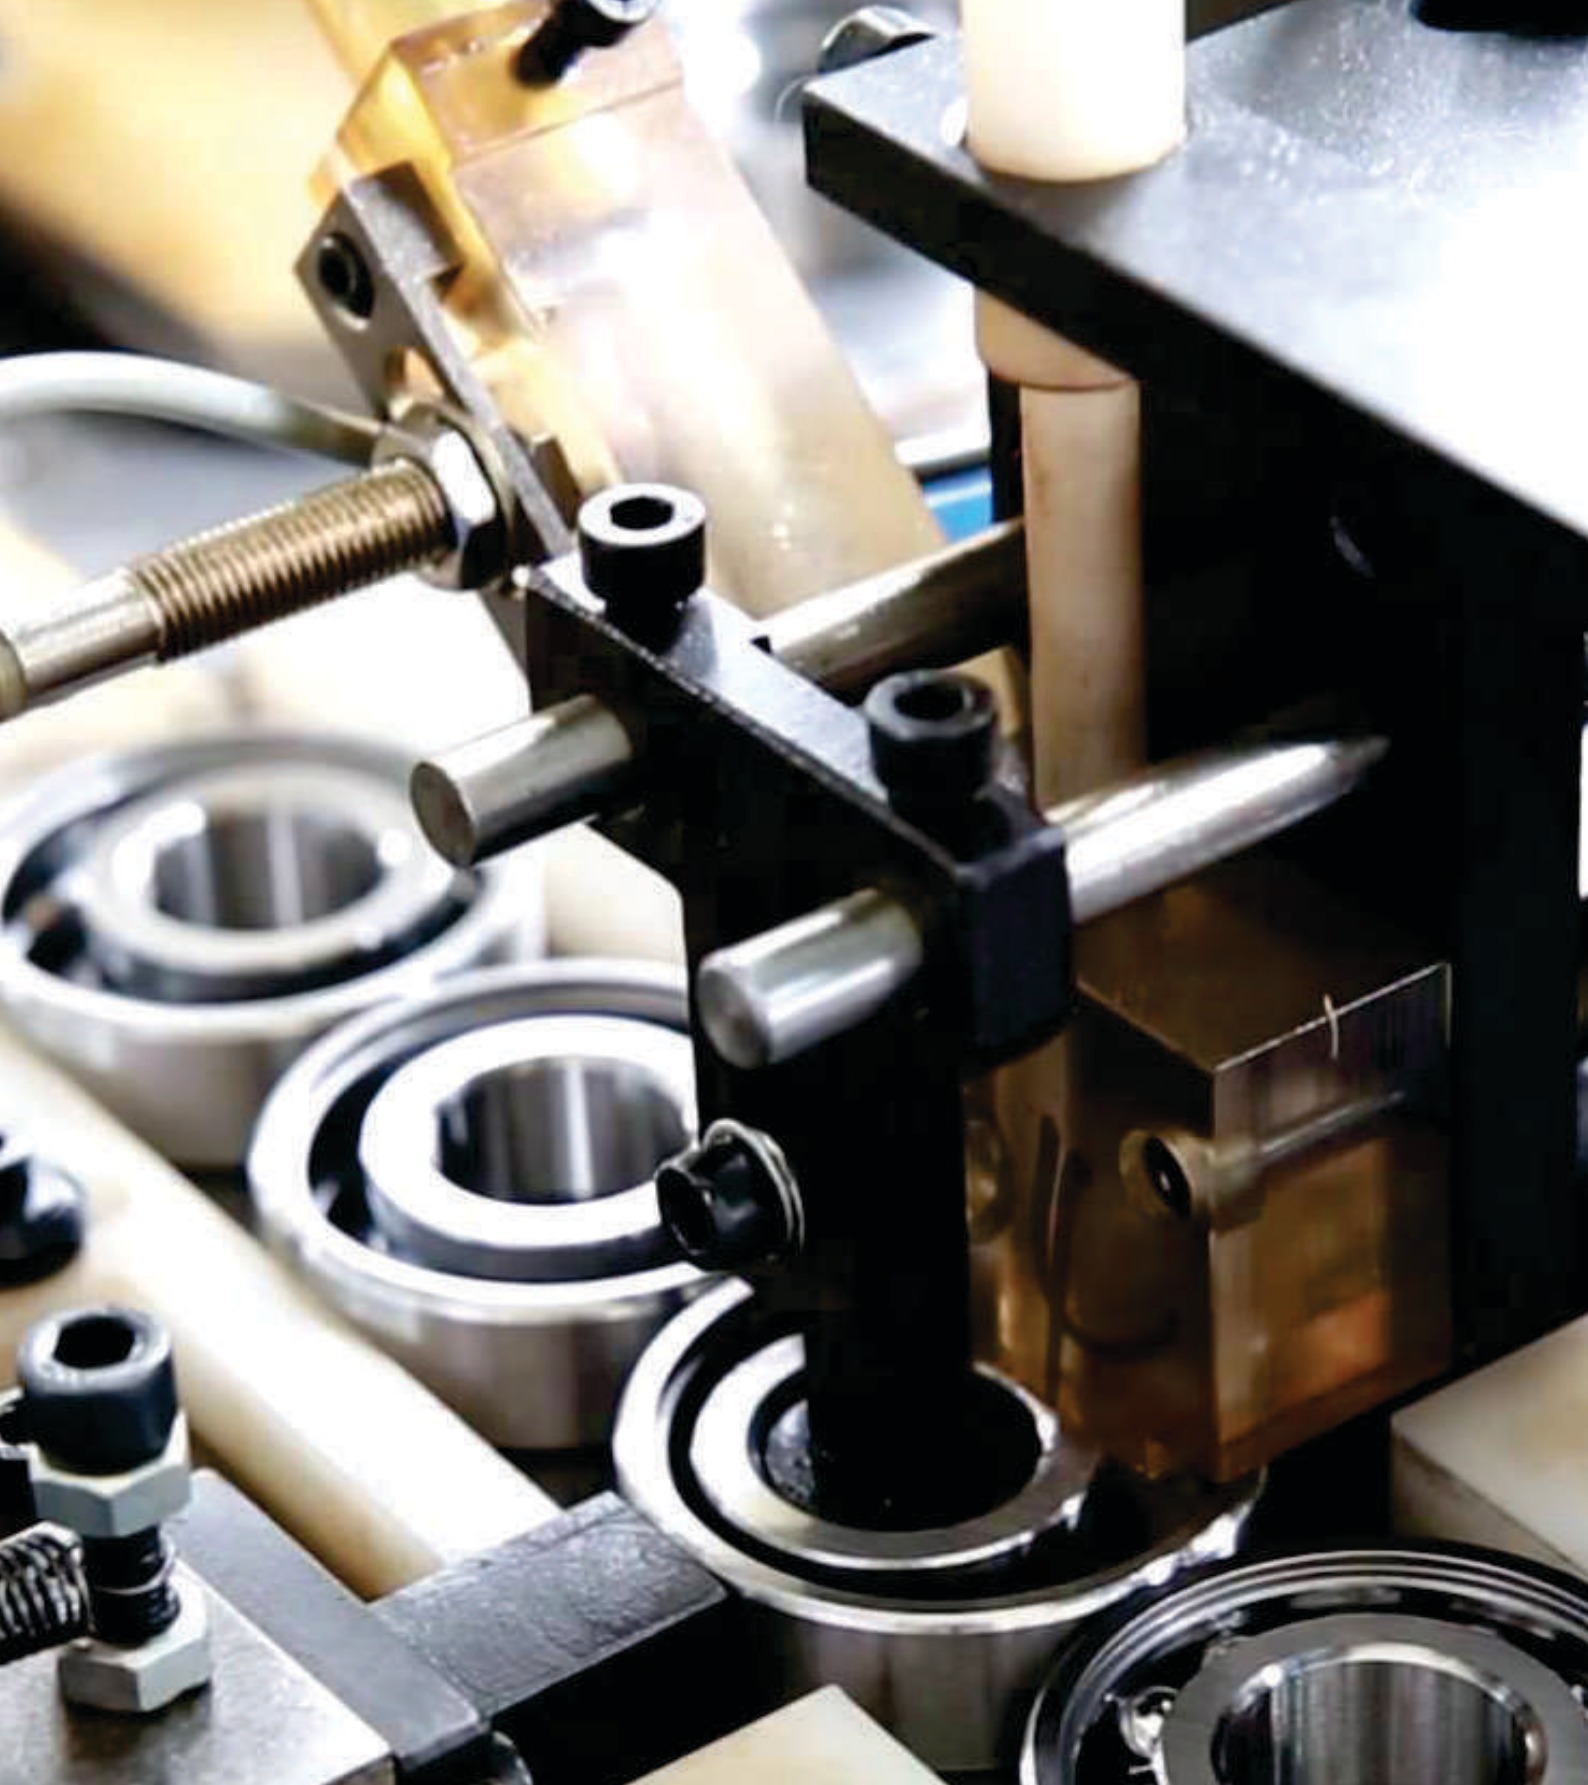

Adapter Sleeve

Adapter Sleeves are the most commonly used components for locating bearings with a tapered bore onto a cylindrical seat.

One Way Clutch Bearing

One Way Clutch Bearings or Freewheels are directional couplings, which means that the driving member rotates the driven member in one direction.
